

Cooling towers in district cooling

Norrenergi supplies Solna, Sundbyberg, Bromma and Danderyd with district cooling through our network. District cooling is produced at Solnaverket, Sundbybergsverket and Frösunda kylstation. Information

Cooling generation

Unit	Cooling generated 2022 (MWh)	% of total cooling generated
Solna kylmaskiner	4 835	8
Solna spillkyla	10 839	17
Frösunda sea water cooling	23 283	36
Frösunda kylmaskiner	21 298	33
Sundbyberg kylmaskiner	4 175	6
Total	64 431	100

At Sundbybergsverket two cooling towers are currently in use, however they supply no more than 10% of the total cooling generated by the district cooling system. Therefore, the district cooling supplied by Norrenergi automatically qualifies for 2 points.
